

WHY VIBE IS BETTER!

VIBE'S NUTRITION IS ABSORBED INTO YOUR CELLS WITHOUT THE NEED FOR DIGESTION.

VIBE'S MINERALS ARE ANGSTROM SIZED. Angstrom is defined as one hundred-millionth of a centimeter in size or 1/1000 the size of a micron. To better appreciate how small an angstrom is, the width of a sheet of paper is approximately one million angstroms thick!

Minerals that are angstrom sized can immediately penetrate your cell membrane. Unlike larger sized minerals, which unfortunately deposit in soft tissues or can only enter the bloodstream, angstrom sized minerals absorb into your cells.

Mineral Pills

Human Cell

If you take vitamin and mineral pills, powders, or tablets, it would be like trying to jam a basketball into a one ounce cup.

Colloidal Minerals

Human Cell

If you take colloidal minerals, it would be like trying to squeeze a baseball into a one ounce cup.

VIBE Minerals

Human Cell

The angstrom sized minerals in VIBE are like effortlessly dropping marbles into a one ounce cup.
